

Why Choose

SUNDANCE PRESS?

Not only is Sundance Press the leader in high quality short run publication printing, we have made it a point to be environmentally responsible from the beginning. Challenging ourselves to be an eco-friendly printer without sacrificing quality, service and value to our customers is a goal we have been achieving for years.

- We exclusively use biodegradable vegetable (soy) based inks as opposed to more harmful petroleum inks.
- Our house sheets are either FSC Certified or contain post consumer fiber and are elemental chlorine free.
- We create our aluminum printing plates directly from computer files thus eliminating film processing and reducing chemical waste.
- We reuse and recycle cardboard, wooden pallets and aluminum.
- We recycle all internal paper waste, machine trim-offs, and makeready stock.
- We recycle all internal glass and plastic that we use.
